## Summary

---

Software Engineer with a strong foundation in backend development and a growing interest in system design. Experienced in building RESTful APIs, implementing authentication flows, and working with relational databases using Go and JavaScript/TypeScript. Familiar with Redis for background jobs and basic distributed task processing. Comfortable working with Git, Linux, and collaborative development workflows. Motivated to learn, improve code quality, and contribute to reliable, maintainable software through hands-on development and continuous learning.

## Education

---

**Udayana University**, BE in Electrical Engineering – Jimbaran, Bali, Indonesia 2021 – 2025  
• GPA 3.82/4.00

## Experience

---

**Full Stack Developer**, Dicoding – Remote Aug 2023 – Dec 2023  
Participant of SIB X Dicoding (MSIB) Cycle 5, a national industry-led program by Dicoding. Completed intensive training in software engineering fundamentals, project-based learning, and professional development through mentorship and team collaboration.

- Participated in a structured software engineering curriculum aligned with industry standards
- Applied clean coding principles and basic system design concepts in team projects
- Capstone project recognized as one of the **Best Capstone Projects** in the program

## Projects

---

**IMPHNEN** 2025 – 2025  
A comprehensive platform designed to help Indonesian UMKM (Micro, Small, and Medium Enterprises) automate financial record-keeping through AI-powered receipt scanning and streamline order management via Telegram bot integration.

- Integrated OCR pipeline to extract structured data from receipt images
- Reduced manual data entry time by 70% through automated extraction and validation
- Designed analytics dashboard summarizing spending trends and product categories
- Built scalable backend APIs using Go and PostgreSQL

**TQ** 2025 – 2025  
TQ is a Go-based task queue system that enables asynchronous processing of background jobs. It provides a robust foundation for handling time-consuming operations outside of the main application flow, improving application responsiveness and enabling horizontal scaling of worker processes.

- Implemented priority-based job scheduling using Redis Sorted Sets and Streams
- Achieved at-least-once delivery semantics with atomic task claiming and acknowledgment
- Designed crash-safe worker recovery, preventing task loss during unexpected shutdowns

**Schemazz** 2025 – 2025  
Schemazz is an interactive application that allows developers and database administrators to visualize database structures by converting SQL queries into clear, readable ERD diagrams. Built with modern web technologies, it provides a fast and intuitive way to understand database relationships and schema design.

- Implemented full frontend UI with React and Tailwind CSS for intuitive database schema exploration
- Built efficient parsing and rendering logic enabling users to generate ERDs from complex SQL definitions

## Skills

---

**Programming:** Proficient with Go, TS, Python, and Git; good understanding of Web, app development, and DevOps

**Languages:** English, Bahasa Indonesia (native)
